JKI revival plan on cards to provide livelihood support to (silk and wool) marginalised sectors

JAMMU, DEC. 20-

The revival plan for Jammu and Kashmir Industries (JKI) MUMBAI, DEC. 20-Ltd is being implemented to make it profitable besides providing official spokesman said on Saturday.

For all your requirement in Linen/Flax Fibres, Tops and Yarns Cottonised flax fibers for cotton spinning in natural and bleached from Wester Europe origin: Nv Jos Vanneste Belgium **Contact:** Eve Fabrics Pvt. Ltd.

The information was given to Lt Governor Manoj Sinha during inauguration of the 'experience centre cum sales outlet' of JKI Ltd worth Rs 6.50 crore at Shaheedi Chowk in the heart of the city, the spokesman said.

On the revival plan of JKI, the Lt Governor was ckmody@evefabrics.com briefed that the revival plan is

being implemented while focusing on making the organisation a profitable and viable entity, besides providing livelihood support to the marginalized sectors of the society, especially those associated with the cocoon rearing and production of wool.

Accordingly, it was also informed that the revival plan of JKI has focused primarily upon revival, modernisation, establishment of units associated with the silk, wool and joinery sectors only.

Speaking on the occasion, the Lt Governor observed that the Experience Centre cum Sales Outlet would lead to a substantial increase in the sales of the products being manufactured by JKI and would also play an important role in making the organization a profitable and viable entity.

It would facilitate the people who found it difficult and cumbersome to visit the manufacturing units of JKI located in the Industrial Estate of Bari Brahamana, Jammu, he maintained.

The Lt Governor stressed to formulate a viable marketing strategy and to open sale outlets outside Jammu and Kashmir.

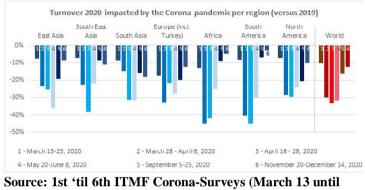

He directed for constituting a three members committee to finalise Brand names of silk and woollen products by organising a public competition to get suggestions for the brand names, the spokesman said, adding Sinha impressed upon officers of JKI to work with high zeal and added efforts so that utilisation of raw material and production reaches its full capacity.

Improved textile turnover expectations for 2020 and beyond: ITMF

Between November 20th and December 14th, 2020, ITMF +15% (6th survey), respectively. livelihood support to the marginalised sectors of the society, an has conducted its 6th ITMF Corona-Survey among ITMF members The turnover expectations for and affiliated companies and associations about the impact the 2024 – compared to the 2019 Corona-pandemic has on the global textile value chain. In total, levels – have not changed (+18% 159 companies from around the world participated.

In comparison to the 5th ITMF Corona-Survey (September 5th - 25th, 2020), the turnover expectations have improved in the that in the medium- and long-6th survey by 4 percentage points from -16% to now -12% compared to 2019 (Graph 1).

Graph 1: Worldwide, expected turnover 2020 is down on average by -12% (versus 2019).

December 14, 2020)

For 2021 and the following years, turnover expectations have overall improved slightly (see Graph 2). On average, the companies are expecting a small improvement from -1% (5th survey) to +3%(6th survey) compared to 2019. Also, for 2022 and 2023 the outlook has improved slightly from +9% (5th survey) to +11% (6th survey)

For all your requirement in Polyester Fibers, **Fops** and **Filaments** Yarn SD, FD, Catatonic for Worsted /cotton spinning from Japan. Korea, Taiwan and South East, Europe and USA. **Contact: Eve Fabrics Pvt. Ltd.** ckmody@evefabrics.com

By Our Staff Reporter

and from +14% (5th survey) to in the 5th and 6th survey).

The latest survey reveals term turnover expectations have not changed significantly.

Nevertheless, due to the reduced turnover drop of -10%

in 2020, the industry is expecting to recover the losses incurred in 2020 by the end of 2022.

> Graph 2: Worldwide, expected turnover to increase by +18% until 2024 (versus 2019).

What is your company's expected turnover from 2020 to 2024 compared to 2019 (regional average)?

Fire breaks out at textile processing unit in Dombivli

THANE, DEC 20-(PTI)

Dombivli MIDC on Friday evening, an official said.

A fire broke out at a chief of Thane Municipal Corporation (KDMC) were textile processing unit in Corporation's Regional engaged in the firefighting in Disaster Management Cell operation," he said. Maharashtra's Thane district (RDMC) Santosh Kadam said.

unit around 5.50 pm. Four fire said.

injured in the incident so far, Dombivli Municipal

The cause of the fire is "The blaze erupted at the yet to be known, the official

anufacturing Manufactul ing Sustamable Dasi **Rotor Spinning System from Raw Material to Yarn**

Interest in bast fibers such as flax or hemp has recently FLAX – A FIBER WITH A DIFFERENCE increased as environmental movements have gained great popularity. Bast fibers are very versatile and valuable for textile obvious. The fabric absorbs moisture from the air and exchanges it and non-textile applications. Rieter offers tailor-made, economical with the ambient air. Thus, the fabric has a cooling effect and is solutions for processing bast fibers in short staple fiber spinning.

the inner bark of plants such as flax, hemp or ramie. Linen (made is hard-wearing and extremely durable. As a result, a linen garment of flax) is one of the oldest textiles developed, dating back nearly can last for many years without damage. 10 000 years.

With today's increasing environmental awareness, textiles the water requirement is low

Fig. 1: Flowering flax field

Especially in summer, the advantages of linen clothing are still dry. An additional benefit of this water absorption is the Bast fiber is a type of plant fiber that can be collected from antistatic effect. The linen fiber is very tear-resistant, so the fabric

COTTONIZATION OF BAST FIBERS

Flax is used as an example to explain the spinning process made of bast fibers are being rediscovered for everyday use as well for bast fibers. Flax is unique in the fact that different types of as for luxury fabrics. Bast fibers are very sustainable. For the fibers can be extracted from the same raw material. Some of these cultivation of flax, for example, very few pesticides are used and fibers are processed via the traditional wet spinning process which, however, is very cost intensive. Other extracted fibers are well suited to be shortened which is a precondition for manufacturing yarns economically using cotton spinning technologies. The process of reducing the flax fibers to short staple fibers and giving them the same characteristics as cotton is called "cottonization". This works in a very similar way with other bast fibers, like for example hemp. FROM FLAX TOW TO SHORT FIBERS

> To prepare the flax tow for short-staple fiber spinning, Rieter is cooperating with the German company Temafa. They are a global expert on blending and opening, recycling, air engineering and natural-fiber extraction. The so called Rieter-Temafa-concept prepares the flax tow in such a way that high-quality yarns can be produced from it using the rotor spinning process. The flax tow is progressively relieved of shives and dust – without a cutting process (See Fig. 2). The raw material is refined in different opening and cleaning stages using machines from Temafa and Rieter. The cottonized material then passes into a baling press.

In this process, the fine cleaner UNIflex B 60 is responsible

Fig. 2: Preparing the flax tow for the spinning mill on a Temafa machine

for giving the fiber material the same length, fineness, purity and spinning characteristics as cotton (Fig. 3). The desired fiber length is set by adjusting the nipping point. This also reduces the shortfiber content and thick, non-fibrillated fibers are removed. The variable opening intensity opens the fiber bundles into individual fibers. Intensive cleaning is performed at the same time by precisely setting the cleaning intensity. The quantity of waste is controlled via the VARIOset function. Using VARIOset and the integrated dedusting unit reduces trash accumulation at the card.

FURTHER COTTONIZATION WITH THE WEB CARD C 75

The web card C 75 sets new benchmarks in quality and productivity for cottonizing bast fibers. Compared to conventional

Weekly US Cotton Market Review

Average spot quotations were up 285 points from the previous yards. week, according to the USDA, Agricultural Marketing Service's Cotton and Tobacco Program. Quotations for the base quality of restrictions of COVID-19 social distancing requirements, producers cotton (color 41, leaf 4, staple 34, mike 35-36 and 43-49, strength 27.0-28.9, and uniformity 81.0-81.9) in the seven designated markets averaged 71.14 cents per pound for the week ending Thursday, December 17, 2020.

The weekly average was up from 68.29 cents last week and from 62.46 reported the corresponding period a year ago. Daily average quotations ranged from a low of 69.72 cents Friday, December 11 to a season high of 72.90 cents Thursday, December 17.

for the week ended December 17 totaled 152,664 bales. This compares to 98,938 reported last week and 109,251 spot transactions reported the corresponding week a year ago.

Total spot transactions for the season were 782,746 bales compared to 711,368 bales the corresponding week a year ago. The ICE March settlement price ended the week at 77.19 cents, compared to 74.26 cents last week.

TEXTILE MILL

leaf 4, and staple 34 for April through October 2021 delivery. Reports indicated that mills continued to incrementally increase training workshops, due to the restrictions of COVID-19 social operating schedules as warranted by increased finished product distancing requirements. demand.

week or more of downtime for the holidays. Mills continued to produce personal protective equipment for frontline workers and military supplies.

Demand through export channels was moderate. Agents for mills in China and Vietnam purchased a moderate volume of color be the result of the increase in commodity prices, particularly 31, leaf 3, and staple 36 and longer for nearby shipment. **AMERICAN PIMA (AP)**

Spot cotton trading was slow. Supplies of 2019-crop were light and were moderate for 2020-crop cotton. Demand was moderate. Producers delivered previously contracted cotton to merchant and cooperative marketing pools. Average local spot prices were steady. No forward contracting or domestic mill activity was reported. Foreign mill inquiries were moderate. Interest was best from China. Shippers offering prices were firm for 2020-crop cotton. The COVID-19 Pandemic slowed U.S. economic recovery and the progress of global economies.

Mostly sunny conditions prevailed throughout the region. Rain and snow were received in California early in the period. Cloudy conditions moved in late week. Much more moisture is daytime temperature highs in the low 50s to low 80s, and overnight needed to replenish water supplies for populace and farming. Ginning continued uninterrupted.

USDA ANNOUNCES SPECIAL IMPORT QUOTA #9 FOR UPLAND COTTON DECEMBER 17, 2020

The Department of Agriculture's Commodity Credit Corporation announced a special import quota for upland cotton that permits importation of a quantity of upland cotton equal to one week's domestic mill use. The quota will be established on Producers prepared fields ahead of the planting season and applied December 24, 2020, allowing importation of 8,108,926 kilograms fertilizer. (37,244 bales of 480-lbs) of upland cotton.

Quota number 9 will be established as of December 24, 2020 and will apply to upland cotton purchased not later than March 23. 2021 and entered into the U.S. not later than June 21, 2021. The quota is equivalent to one week's consumption of cotton by domestic light. Trading of CCC-loan equities was inactive. Foreign inquiries mills at the seasonally-adjusted average rate for the period July were moderate. Interest was best from China, Korea, and Vietnam. 2020 through September 2020, the most recent three months for The COVID-19 Pandemic continued to impact commodity markets which data are available.

Due to the high rate of infection and the accompanying and other interested parties attended virtual industry meetings and useful training workshops. According to the U.S. Drought Monitor report released on December 17, abnormally dry conditions expanded in the cotton producing areas of southern Arkansas and western Tennessee. Adequate soil moisture was reported in the Bootheel of Missouri.

South Delta

Spot cotton trading was inactive. Supplies of available cotton were moderate. Demand was light. Average local spot prices were Spot transactions reported in the Daily Spot Cotton Quotations higher. Trading of CCC-loan equities was inactive. No forward contracting was reported. The COVID-19 Pandemic continues to negatively impact economic activity around the world and daily infection rates were steadily increasing in many areas.

Clear to partly cloudy conditions prevailed during the week. Temperatures were seasonably cool, with highs in the 40s and 50s. Overnight lows were in the 30s. A cold front brought nearly 3 inches of rain to the territory during the week. No field activities were reported, due to cold and wet weather. A few gins completed annual Domestic mill buyers purchased a heavy volume of color 41, pressing operations, but several larger gins continued processing backlogs of modules. Producers attended virtual informational and

According to the U.S. Drought Monitor report released on Yarn demand was good. Mills planned a few days or up to a December 17, abnormally dry conditions deteriorated to moderate drought in isolated parts of the cotton producing areas of northwestern Louisiana and central Mississippi. Producers reported that the price of cotton seed has jump from \$175 to \$275 per ton recently. Local experts indicated that the dramatic increase could soybeans.

SOUTHWESTERN MARKETS

East Texas

Spot cotton trading was active. Supplies and producer offerings were heavy. Demand was good. Average local spot prices were higher. Producer interest in forward contracting was light. Trading of CCC-loan equities was moderate. Merchants purchased a light volume of cotton forfeited to the CCC-catalog. Foreign inquiries were moderate. Interest was best from China, Korea, and Vietnam. The COVID-19 Pandemic continued to influence market uncertainty and impact global cotton demand. Medical communities struggled with positive case surges.

In Corpus Christi, cool, crisp conditions were reported with lows in the 40s to 60s. Beneficial rainfall was received in south Texas with heavier accumulations in the Upper Coast early in the period. More precipitation will be needed ahead of sowing to recharge waterways. Ginning neared the end in the Upper Coast, the Blackland Prairies, and in the Winter Garden area. Yields were lower than expected and ginning continued towards the last module. Harvesting was virtually completed in all parts of the Texas region.

West Texas

Spot cotton trading was active. Supplies and producer offerings were heavy. Demand was very good. Average local spot prices were higher. Producer interest in forward contracting was and global cotton demand. Infection spikes continued to pressure

established if price conditions warrant.

SOUTHEASTERN MARKETS

Spot cotton trading was moderate. Supplies were moderate. Producer offerings were heavy. Demand was good. Average local spot prices were higher. Trading of CCC-loan equities was inactive. The COVID-19 Pandemic continues to negatively affect cotton demand and disrupt supply chains.

Mostly cloudy conditions prevailed across the lower Southeast during the period and widespread showers brought rainfall to areas throughout Alabama, the Florida Panhandle, and Georgia. Daytime high temperatures in the upper 60s to low 70s over the weekend dropped into the upper 40s to mid-50s late during the week as a cold front moved across the region. Weekly precipitation totals Gulf and Atlantic coastal areas, with heavier accumulations of one to three inches observed in central and north Alabama and Georgia. The wet conditions delayed fieldwork and idled pickers where producers were attempting to harvest the remaining fields. Gins continued to process backlogs of modules.

SOUTH CENTRAL MARKETS

North Delta

higher. Trading of CCC-loan equities was slow. Merchants purchased a light volume of cotton forfeited to the CCC-catalog. infection rates were steadily increasing in many areas.

Mostly cloudy skies and seasonably cold temperatures dominated the weather pattern during the week. Highs were 30s. Up to 2 inches of precipitation was reported during the period, including a few snow flurries in northern areas. No field activities were reported as cold and damp conditions prevailed in many areas. Many small gins have completed annual pressing operations, but was reported. Foreign mill inquiries were moderate. larger gins continued to work through backlogs of modules on their

Future quotas, in addition to the quantity announced, will be local medical institutions and resources. The initial lot of vaccines were received and hospital employees were among the first to receive injections.

> Winter weather early in the reporting period brought up to 5 inches of snow in the northern portions of the High Plains. Light rain and drizzle were received in other parts of the region. Transportation of modules had slowed intermittently. Some gins in the Panhandle expected to be finished in about 10 days. Further south, a few gins expected to run into the New Year. Some fields were plowed and prepped for winter. Harvesting and ginning continued in the Rolling Plains.

WESTERN MARKETS

Desert Southwest (DSW)

Spot cotton trading was active. Supplies and producer measured from one-half of an inch to one inch of moisture across offerings were heavy as ICE futures prices posted daily gains in the period. Demand was good. Producers delivered previously contracted cotton to merchant and cooperative marketing pools. Average local spot prices were higher. No forward contracting or domestic mill activity was reported. Foreign mill inquiries were moderate. The COVID-19 Pandemic continues to pressure the U.S. economy.

Daytime high temperatures were in the 60s for central Spot cotton trading was slow. Supplies of available cotton Arizona. No rainfall was recorded in the period. Isolated fields were moderate. Demand was light. Average local spot prices were remained to be harvested in the region. Gin yards were full of modules. Ginning continued throughout Arizona, New Mexico, and El Paso, TX. Sources reported ginning was 65 to 75 percent ginned. No forward contracting was reported. The COVID-19 Pandemic Lack of rain and snow are more of a concern going into 2021. continues to negatively impact the overall global economy and daily DSW watersheds are low and producers are expecting to pump water for next year's crop if prices remain high.

San Joaquin Valley (SJV)

Spot cotton trading was inactive. Supplies were moderate. generally in the 30s and 40s. Overnight lows were in the 20s and Demand was good. Producers delivered previously contracted cotton to merchant and cooperative marketing pools. Average local spot prices were higher. The COVID-19 Pandemic continues to pressure the U.S. economy. No forward contracting or domestic mill activity

Prices move up

Manufacturing Sustainable Bast Yarns - Modern rotor spinning system from raw material to yarn

Continued from Page 1 Col 6

better raw-material utilization. can be additionally influenced. The card is adapted to suit the the fiber's refinement, length and purity. The one-roller lickerin module is used to open the fibers gently. The mote knife on the licker-in module ensures that any remaining shives, unopened flax bundles and dust are removed efficiently. The efficient removal of these components and the short fibers is continued by the carding elements in the preand post-carding zones. The main carding zone facilitates the separation and removal of short fibers, contamination and fiber neps. The cottonized web sliver passes into a baling press. The

of bast fibers. The incoming draw frame sliver is opened into single cards, the card technology with fibers in the spinning box, whereby the fiber material undergoes a 1.5-meter working width further cleaning and particles can be removed. In the case of blended achieves a reduction in process- yarns, the blend is improved by the re-doubling in the rotor grove. related waste which results in With the spinning nozzles in rotor spinning the yarn characteristic

Yarns made of flax blends or of 100% flax are manufactured flax fibers using appropriate efficiently on the Rieter rotor spinning machines R 70 (fully carding elements. The focus is on automatic) (Fig. 4) or R 37 (semi-automated). These machines

Fig. 4: Yarns of 100% flax or blends can be produced economically on a rotor spinning machine.

offer unique advantages in this context: The R 70 with its wellestablished Rieter spinning box allows an optimized trash extraction using the optimized BYpass for exact setting in combination with an adaptor part. For spinners using a semi-automated rotor spinning machine, the R 37 offers a special trash channel to make sure the copes well with the heterogeneous flax fibers. It opens material heavy bast fibers are kept in the spinning process and are used

Depending on raw-material quality, yarn counts of Ne 4 to When it comes to mixing, the UNImix B 72 with its three- Ne 10 can be spun from 100% flax. The finer the yarn count the

Flax yarns produced on rotor spinning machines offer The yarns have higher elongation, lower hairiness, a lower shive For blends with cotton or man-made fibers the spinning and dust content and significantly better downstream processing Blended yarns are suitable for producing easy-care garments. The blends offer a wide scope for designing fashion items and thus enable a considerable expansion of the product range. The woven fabrics and end products offer good abrasion resistance and higher

bales are then ready for spinning

The specific structure of the bast fibers calls for suitable preparation technology. The automatic bale opener UNIfloc A 12 uniformly from the bale and prepares the optimum tuft size for the optimally. subsequent machines.

point mixing principle is the ideal machine. The large storage higher the amount of fine fibers required. With blends yarn counts capacity provides for an appropriate dwell time for the material up to Ne 20 are possible. and thus ensures a trouble-free production flow. Depending on the yarn counts to be spun, an integrated autoleveler draw frame module advantages in the end product compared to traditional ring spinning. after the card is sufficient for 100% flax.

preparation process is different and involves the blender UNIblend behavior. In addition, the conversion and equipment costs are low. A 81. Depending on the quality requirements, carding is followed by one or two draw frame passages.

DECISIVE ADVANTAGES WITH

ROTOR SPINNING OF BAST FIBERS

Rotor spinning machines offer advantages for the spinning dye retention.

Power consumption grows 4.8% in first half of December **TO KNOW** Want MORE ABOUT

NEW DELHI, DEC. 20—

grew 4.8 per cent to 50.36 billion December 2019, December this year, showing data.

Power consumption was a year-on-year growth for the compared to 93.94 BU in the recorded at 48.04 BU during fourth month in a row, according same month last year mainly due December 1-15 last year, to experts. to early onset of winters.

according to the power ministry India's power consumption data. For the full month of power consumption recorded a units (BU) in the first half of consumption was 101.08 BU. Therefore,

consistency in economic extrapolation of half-month data activities, as per government clearly indicates that power consumption growth slowed to consumption is likely to record 3.7 per cent to 97.43 BU

After a gap of six months, power year-on-year growth of 4.4 per cent in September and 11.6 per the cent in October.

In November, the power

Stahl selects Finboot's blockchain solution Marco to share verified sustainability credentials with brands that use its products

MUMBAI, DEC. 20-

verifies its products' sustainability credentials with brands that use materials treated with Stahl chemicals.

and fabrics. Its direct customers are tanneries and other small in the fashion and automotive industries. Leading brands require that their suppliers only use chemicals from approved providers. That is why Stahl works closely with them to share relevant data about its products' sustainability properties.

flexible surface chemical industry, MARCO creates immutable production. digital assets of Stahl's products to deliver transparency and traceability within Stahl's supply chain in a way that no other digital technology can. This means that the end-brands have direct and easy access to accurate and verified information about the overall substances and the provenance of the raw materials.

its products in order to further solidify its position as the global and sustainability credentials of the products they are buying".

From Tecoya NewsDesk

leader in its sector. As part of this, the company has sought to Stahl, the world leader in the specialty chemistry of coatings, increase the amount of renewable raw materials used in its processing and treatments, has engaged leading blockchain group manufacturing processes. The revolutionary transparency provided Finboot to supply its blockchain middleware solution MARCO. by blockchain will play a key role in substantiating Stahl's move This solution will enable Stahl to improve the way it shares and away from petrochemicals to new, more sustainable raw materials.

Following successful implementation and scaling of the solution, Stahl could potentially connect with brands' existing Stahl specializes in the production of surface treatment and blockchain ecosystems in the future. Alternatively, the brands could coating solutions for flexible surfaces, such as leather, synthetics plug into this new ecosystem developed by Stahl and Finboot. Further down the line, there is also scope to provide end-to-end manufacturers that supply their materials to brands, predominantly traceability along the entire supply chain for the full manufacturing process of the flexible surfaces that use Stahl products. This means that brands will eventually be able to provide end-to-end visibility on the entire manufacturing process and supply chain behind the creation of their goods (for example, a leather handbag), down to

In the first blockchain implementation of its kind for the the raw materials that make up the chemicals used during

John Fletcher, Chief Innovation Officer at Stahl, said: "Providing customers with transparency of our sustainability and supply chain due diligence efforts is extremely important to us as we further cement Stahl's position as an ESG leader in our sector. properties of Stahl's products so, that they too, can verify the By integrating Finboot's MARCO middleware & application suite sustainability credentials of their own supply chains. These into our digital ecosystem, we are able to demonstrate that we are properties include documentation such as bill of materials, bill of actively seeking to drive positive change in our industrial processes.

This is not just for the benefit of the brands which use materials Stahl's adoption of MARCO is part of the company's ongoing that have been treated by our chemicals but for their customers too, strategy to focus on improving the environmental sustainability of who are becoming increasingly conscious about the provenance
