International Textile Machinery Shipment Statistics

Vol. 47/2024

International Textile Machinery Shipment Statistics has been compiled with the cooperation of over 200 manufacturers of spinning, drawtexturing, weaving, knitting, and finishing machinery. This number entails the Chinese companies which are included in the so-called "District". The 2024 coverage for each of these segments is virtually complete, with the continuation of comprehensive Mainland Chinese participation. In the context of this publication, the term shipment refers to machinery produced by the participating manufacturers for both the domestic market and export and physically shipped during the year under review. This should not be confused with sales or installations.

The actual number of short-staple ring spindles, open-end rotors, and shuttle-less looms (the latter divided into rapier/projectile, air-jet, and water-jet) shipped by the participating manufacturers during 2024 to the countries listed in this publication are shown alongside 2023 year-end capacity figures and cumulative shipments over the last 10 years in sections 1 and 3, respectively. In regard to long-staple ring spindles, drawtexturing spindles, and circular and flat knitting machinery (sections 1, 2, 4 and 5), cumulative shipment data is available, but installed capacities is not. For finishing machinery (section 6) no cumulative data are presented either. Volume 47 of the International Textile Machinery Shipment Statistics represents the 51st year of the statistical series. It was first published in 1974 (then titled International Cotton Industry Statistics Supplement).

Reading notes:

1/ Since 2019, ITMF estimates the total number of stenters shipped by companies not participating to the ITMSS survey to evaluate the global market size. These shipments are registered to the destination "Not specified (World)". Hence, the total number of shipped stenters represents the estimated total market for stenters.

2/ Blank cells in the tables represent zero unit.

3/ The regions called "Not specified (World w/o China)" and "Not specified (World w/o India)" entail shipments to unknown destinations outside China and India, respectively. The region called "Not specified (World)" entails shipments to any country on the planet.

4/ Long-Staple spindles installed capacities have not been updated. The figured are not shown in this report.
